Allestree. 1633.

A New Almanacke, and Prognostication, for the yeare of our Lord God.

1633.

And [illegible] the Creation, 5595.

Being the first after Leape Yeare.

Calculated and properly referred to the longitude and sublimity of the Pole Artick of 51. deg. 32. min. And may generally serue for the whole Ile of Great BRITAINE.

Minor prælemporis ratio.

By Richard Allestree.

LONDON.

Printed by W. S. for the Companie of Stationers.

Ad hujus Libri Prognostici amici sui charis. M. R. Allestree Lectorem carmen Prognosticon.

STelliferi secreta Poli non parua recludit,
& manifesta facit parvulus iste liber.
Vana superstitio nulla hic ars impia nulla,
ista licet rabido Zoilus ore crepat.
Cuncta Deo subsunt, Cœlumq;, Solumq;, Salumq;,
quæq; jubet facient Sidera, terra, mare:
Prima Deus causa est, causæ sunt Astra secundæ,
nil, si prima vetet, causa secunda valet.

H. B.

Ad amicum suum Candidum Richardum Allestree

Æthere nonne Deo placido tu missus ab alto?
Error erit levior si peccem talia fando.
Nam sapis alta: putet nemo quin astra, felicta
Terra, summa petas, tibi quod via nota per Orbes
Volantes; non obstabunt tibi prætereunti,
Æthere æq; domus, ni vt servo gratificentur.
Te tamen ipse precor, populo dum ficut amicus,
Illuc vt serus redeas optoq; frueris.
Vita permultos ter læta dicere menses,
Crimen vt ignoscas mihi: define Musa canendo.

Rob. Woodford.

The booke of martyrs, newly imprinted in Londo
1632. in three volums, with additions of diu
Martyrs, that haue suffred for the Gospell in forr
parts, together with the barbarous cruelties exerc
vpon the professors of the Gospell in the Valto
and with diuers other additions.

A necessary and perfect rule for euer to know when the 4. Termes begin and end; and how many Returnes are in euery Terme.

Eight dayes before a Terme shall bee,
The Exchequer openeth certainly;
Except the Terme of Trinity,
Which openeth but 4. dayes before assuredly.

1. Hilary Terme beginneth the 23. day of January (if it be not Sunday) but then the next day after, and endeth the 13. of February, and hath 4. Returnes.

Octabis Hilarij } { Crastino Purificationis.
Quind. Hilarij } { Octabis Purificationis

2. Easter Terme beginneth 17. dayes after and endeth 4. dayes after Ascention day, and hath 5. Returnes.

Quind. Paschæ } { Mense } { Quind. Paschæ.
Tres Paschæ } { Paschæ } { Crastino Ascentionis.

3. Trinity Terme beginneth the next day alwayes after Corpus Christi day, and endeth the Wednesday fortnight after, and hath 4. Returnes. Note that Corpus Christi day is alwayes the Thursday after Trinity Sunday.

Crastino Trinitatis } { Quind. Trinitatis.
Octabis Trinitatis } { Tres Trinitatis.

4. Michaelmas Terme begins the 9. of October (if it be not Sunday) and endeth the 28. day of November, and hath 8. Returnes.

Octabis Michael } { Crastino Animarum.
Quind. Michael } { Crastino Martini.
Tres Michael } { Octabis Martini.
Mense Michael } { Quind. Martini.

In my Calender following you shall finde both the beginning and endings of the Termes, and all the Returnes set downe vpon the dayes of the moneth that they fall vpon this yeere 1633.

Charles our Soueraigne King, did begin his reigne ouer Great Brittaine, Anno 1625. March the 27. and hath reigned 8 yeares compleate this yeere 1633. March 26.

Veneris ihgens ſidus, cum ante graditur Solem φωσφόρος Græcè Lucifer, Latinè dicitur: Cum ſubſequitur, & ab occaſu refulget, veſper, veſperugo, & ἕσπερος appellatur.

This Golden planet *Venus* is Occidentall, from the 1. day of Ianuarie this yeare 1633. vnto the firſt day of July following, and ſo long this yeare ſhee is our glittering Euening Starre ſetting after the going downe of the Sunne, and therefore termed Heſperus, vel veſper: that is, the Euening Starre. And all the reſt of the yeere elſe, ſhee is Orientall riſing before the Sunne in the Morning, and therefore called Lucifer and our glittering morning ſtarre and ſo continuing vnto the day of Aprill Anno 1634.

A most plaine and easie Table shewing the true time of the beginning, continuance, and yeeres since the reigne of each King and Queene in this Land, from the Conquest, within this yeare, 1633. Gathered forth of Chronicles.

The Kinges names.	Began their reigne.	The time they reigned.	Since their reigne.

A true definition of naturall Astrologie by the Author.

Astrologia vera ac eruditæ physicæ pars est, inquirens proprietates, vires, effectus ac significationes stellarum, quas in elementari natura & microcosmo excitant, non quidem curiosè & superstitiosè, sed verarum observationum & rationalis experientiæ testimoniis, idq; per certas hypotheses artisque principia & Phænomena. Horum principiorum naturam & demonstrationem generalem ob oculos ponet doctrina Spherica. Est enim cœlum vehiculū diuinæ virtutis, quo, mediante motu & lumine stellarum tanquam causis secundis, Deus cuncta hæc inferiora gubernat & disponit. Non tamen necessitant absolutè, sed conditionaliter, & inclinant fortiter.

In the 7. or last column of this my Almanacke towards the right hand, you haue the houre and minute of the Sunne rising for euery day in the yeare at London: which houres and minutes are halfe the length of the same night. For example: the 1 of Ianuary, the Sunne riseth at London, at 8. of the clocke, and 4. min. after: that length being doubled, makes 16. houres and no min. the length of that night. And to know the time of the Sun-setting in the same place through the yeare take the houres and min. found in the Almanacke for Sunne-rising from 12. and you shall haue the Sun-setting left, which being doubled, is the length of that day. Example: Ianuary the 1. day aforenamed, the Sunne riseth at 8. and no min. take 8. from 12. and there resteth 4. houre of Sun-set that day, the houre of 4 being doubled maketh 8. houres, the length of that day, and so of all the rest. This is very easie.

The description of the Sanguine people.

The bodies where heat, and moisture dwels,
Bee sanguine people, as *Galen* tells,
With visage faire, and cheek's rose ruddy,
Their sleep's are much, and dreams bee bloudie.

Look for ½ Eclip. of the Sun the 22. day in

The Melancholick complexion.

Melancholy is cold, and very drye,
As heere in verse, his signes will try,
Haire playne, and very thinne,
A leane wretch, with hardnesse of skinne,

The Vse of this Table is easily had, by adding or substracting the houres and minuts from the time of the full-sea at London bridge, noted in the diarie of my Almanack, in so doing it sheweth you the time of full-sea in all these places aboue noted: with this Caution, that Winds, Land-floods, the Moones Latitude may bee an hinderance, or forthcrance of the time houre more or lesse.

An Appendix vnto the precedent Almanacke, for this present yeere of Grace M. DC. XXXIII.

Wherein you may obserue a briefe Chronology of yeers: A Description of all the Eclipses of *the Sunne and Moone, with a* Type of the Suns Eclipse in England this yeere (*if the Aire be cleare:*)

Astronomicall Calculations: some Physicall notes, and notes of Husbandry, and Gardening, with a Chronography of the 4. Quarters of this yeere.

Vsefull and pleasant for all those which are desirous of such a worke.

By RICHARD ALLESTREE.

GOD maketh Lightning with Raine, and bringeth the Windes out of his Treasures: Ier. 10. 13. Thus nature is an Order prescribed and set downe by God.

LONDON,
Printed for the Company of Stationers. 1633.

Vpon what daies, the Faires of the Borough of *Derby* are kept, this present yeere, 1633. as followeth.

The first is vpon Friday in Easter-weeke.
2. The third and fourth dayes of May.
3. The Friday in Whitson-weeke.
4. The XXII. day of Iune being Saturday before Midsummer-day.
5. The 25. of Iuly, being S. Iames day.
6. The 26. and 27. dayes of September.

LOuing Reader, I haue set downe in the first great Columne of euery moneth this yeere, how you may find in what signe and degree of the Zodiaque, any of the 6. Planets be: the 7. Planet Luna you haue her place set downe in the Zodiaque for euery day at noone. And as the Planets for the houre of noone, so is also the Dragons head, in the Zodiaque; the Dragons taile is alwaies in the opposite Degree and minute to the Head.

Example of these things for this yeere. 1633. January the 2. day you shall finde Saturne thus Charactred, ♄ ♐. 7. d. 21. which is as much to say, Saturne is in the 7. degree, 21. minuts of Sagitary that day at noon. Iupiter the 3. day thus, ♃ ♉ 15. d. 25. which is as much to say, as Iupiter is in the 15. degree. 25. minutes of Taurus the 3. day: so of all the rest in all the moneths. By this rule and working by the Rule of three, you may find what Signe and degree any of the Planets are in any day in this yeere. As thus, if ♄ moue 1. degree, 3. min. how many in 1. day.

A Compendious Chronology of yeeres expired within the compasse of this present yeere. 1633.

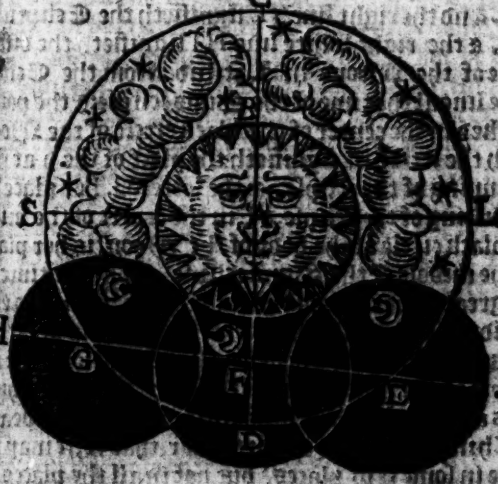
A Deſcription of all the Eclipſes within this preſent yeere of Grace. 1633.

with a Type of the firſt Eclipſe of the Sunne.



In this Type or Figure of this partiall Eclipſe of the Sunne the 29. day of March being Friday (if the ayre be cleare) will be viſible to our Nation in England in this forme. It will be the 8. of March according to the Roman accompt, and it will begin with us at 3. a clocke and 16. minutes in the afternoon at London, the middle at 4. a clocke and 7. minutes: the end at 4. a clock, 52. minutes. From the beginning to the end is one houre 36. minutes. The Digits Eclipſed are 4. and 2. min. ſcr. Both the Luminaries at the middle of the Eclipſe in the 19. degrees, 13. min. & 27. ſeconds of Aries. In which figure alſo obſerve, that Letter A ſignifieth the center of the Sun, and

vpon the centre A is drawne a great circle, mar-
w: the letters C S D L, wherof the letter C sig-
fieth the North, D the South, L the West, & S the
East: vnto which circle when the Moon on the east
part, the Eclipse of the Sun beginneth; & it ende
when the Moon cōmeth to the said circle of the E
side. And the right line S L signifieth the Eclipti
line, & the right white line H I signifieth the di
rence of the Moone in Latitude from the Ecli
ticke line at the time of the Sunns eclipse; & the po
marked in the center of the black circle of the M
with the letter E, signifieth the place of the ☽ at
beginning of the eclipse, & the letter G. her place
the ending of the eclipse, & F in the centre of the in
ble black circle of the body of the Moon, is her pla
at the middle of the Sunns eclipse, or at the time
his greatest darkenes: the right down line F V is t
semidiameter of the ☽ at the time of his greatest
darkes. And this is a generall observation that
eclipse of the Sun is neuer all (except that
was at full Moon, for against nature at the beg
of Christ) but always particular, that is, it may
seene in some few places, but not in all the places
the world, as example, this eclipse will be pla
seen in England, France, Spaine, Italie, & in some
ons of Africa, Barbaria, Fessa, Moroco, Bile, Azan
Hoden, Melli, &c. Insulisque fortunatis Capitis vi
neither doth it appeare in all places of one le
nes, or shape, but in one place is almost total, &
nother place at the same time (as here) partiall,
the same time in other places again there appear
no eclipse at all. The causes of which diuersity
bin before plainly declared at large in my Almana
1629. And take this for a generall note in
this, that any other planets but the Moon can
eclipse or darkned by the body of the earth
or Sunn; because their shadowes reach not

Mercury, theſe place is alwaies ſo nigh vnto the place of the Sun, as they cannot be Eclipſed at any time.

The ſecond or latter eclipſe of the Sun this yeer, whole rayes are interepted & regelled by the Opacous body of the Moone, will ſeeme to be hidden from ſome forraine countries, as in Inſula Madagaſcar & Malabarum regione: Item Calecutij, Goæ, &c. but it will not be eclipſed vnto vs in great Britaine, becauſe this Eclipticall conjunction will not be vpon our Horizon, & alſo for the Meridior all latitude and Parallax of the Moone at the ſame time: yet to the before named regions it will be ſeene almoſt a totall Eclipſe vpon the 3. day of October being Munday, at 5. a clocke, 3. min: in the morning, both the Luminaries in the 10. degree, 3. min: of Libra, not far from the Dragons taile. The digits Eclipſed are 11. 3. min. 30. ſeconds. The whole duration is 3. houres, 32. min. But according to our accompt the 23. of September the ſame Eclipſe will be.

To the Ciceroes own words, Cicero de natura deorũ: Monſtra prædictiones, & præſenſiones rerũ futurarũ: quid aliud declarant, niſi hominibus ea, quæ futura ſunt, protendi, prædici, ex quo illa oſtenta? &c. If I may be ſo bold, I doe Engliſh him thus. Theſe ſtrange tokens or ſhewings, prophecyings and foreknowings, & foreperceiuings of things to follow and come: what other thing doe they declare, but ſuch things as ſhall in deed follow after, to be before ſignified, beobſerued, and ſhewed vnto men, &c? Monſtrum, i. ſignifies any thing that is ſignified by it.

Saturne is Retrograd from the 10. of March to the 30. of July: & al the yeer elſe he is direct in his motion

Iupiter is direct in his motion from the beginning of the yeer to the 7. of Oct. from thence vnto the yeers end retrograd. Mars is direct in his motiõ al this yeer

Venus is direct from the beginning of the yeere to ♀ 11. of June: from thence to ♀ 24. of July retrograd,

UMI

Mercury is moued contrary to ẏ succession of ẏ signes, first, from ẏ 17. of Ianuary to ẏ 11. of Febru-ary: 2. from ẏ 13. of May to ẏ 5. of June: 3. from ẏ 6. of Septemb. to the 29. of the same. And al ẏ rest of ẏ yeer he is moued according to ẏ succession of ẏ signes.

The true or apparent magnitude of ẏ Tropicall yeer, is 365. dayes, 5. houres, 55. scru. 37. sec. 10. thirds.

And according to the Ptutenicall tables it begin-neth ẏ 10. day of March, ẏ 12. houre. 48. min. 13. se-conds after noone Astronomically: at what time ẏ Sun entreth ẏ 1. min. of the Æquinoctiall signes, ries, making equall day and night.

Direction is ẏ progression of a Planet according to the succession of the signes, which is made from the West into the East: as from Aries vnto Taurus, from Taurus vnto Gemini, &c.

Retrogradation, is ẏ motion of a Planet moving contrary to the succession of the signes, from East to the West, as when a Planet returneth from Tau-rus into Aries.

Stationary, is a motion of a planet, like a man rest-ing quiet, viz. when a planet goeth forward neither towards the East, neither toward the West in ẏ Zodiacke. A planet is said to be Oriental, when in the morning it riseth before the Sunne and Occi-dentall, when it setteth after the Sun.

The line Ecliptick is a Circle in the heauens, in ẏ midst of the Zodiacke, vnder the which the very middle center of the Sun doth continually moone.

Latitude in the Heauens, is ẏ wideneſſe or di-stance of the planets or starres from the Ecliptick, (as ẏ right line HI signifieth the difference of the Moone in the Latitude from the Ecliptick line, in ẏ Type of the Eclipse of the Sunne before) viz. Northward or Southward.

Altitude of a Planet is ẏ motion of such a plan-et in which it is carried from his lowest place of hea-uen, or from the center of the Earth,

higheſt place, or vnto the top of his circle, and then a planet is ſaid to be in apogæo, that is, the moſt higheſt point, and moſt remote from the earth.

The Loweſtnes of a Planet, is when as he is placed in the oppoſition of his Angle, and then he is ſaid to be in Perigæo, and the neereſt point to the center of the earth, for theſe two places in which is ſaid to be the higheſt and loweſt places of the Planets, the which are named Abſides ſumma, & ima, illa Apogæum, hæc perigæum.

Epicycle eſt vocabulum artis, vſed in Aſtronomy, it ſignifieth a leſſer circle, whoſe center or middle part is in the circumference of a great circle.

In the vpper part of this Epicycle, the 5. Planets, Saturne, Iupiter, Mars, Venus and Mercury, doe moove forward according to the courſe of the ſignes, as from Aries to Taurus, &c. But when they are in the lower part of it, then they are Retrograde, (as I haue ſaid a little before) that is, goe backeward, as from Gemini to Taurus, ſo from Taurus to Aries.

Vacuus curſ. or void of courſe, is when the Moone or any other planet is ſeparated from a planet, and not ioyned to another during his or her reſidence in the ſigne. Sauage or wild, is when ☽ Moon or any other planet is in a ſigne, & not aſpected of another.

The Golden number or Prime, is the number of 19. yeeres, in which time the Sun and Moon make all the variety of their Changes, Fulls, and Quarters.

Epact, is the 11. dayes & 3. hours, which are added to the yeer of the Moon, being 354. dayes, to make it equall with the yeer of the Sun, which conſiſteth of 365. dayes & 6. hours. By ☽ Prime is found out the Epact, & by ☽ Epact is found out the age of ☽ Moone.

The Circle of the Sun, is the number of 28. becauſe in 28. yeers, all the variety of the Dominical letters & Leape yeers are expired, and the 29. yeere the Circle doth begin againe.

The vse of which number is to find out the Dominicall letter for any yeer past, present or to come. Horizon, is a great circle, dividing that part of the heauens which we see, from the other part which we see not.

A Chronography of the 4. Quarters of this yeere. 1633.

The Hyemall Solsticiall, or winter Quarter doth begin Astronomically, the last yeer 1632. December 11. day, 15. houre, 46. min. 14. sec. at what time the Sun entred into the 1. min: of the imaginary signe of cold and earthly Capricorne, being then declined from the Æquinoctiall, according to the obseruation of Tycho de Brache 23. degrees, 31. min. 30. sec. to the Southwards: at which time the dayes be at the shortest, and nights at the longest with vs.

2 Æquinoctium vernum: or our Spring Quarter, beginneth with vs Astronomically, the 10. day of March this yeer, at 15. houres, 48. min. 13. sec. afternoone: at what time the neuer resting Sun entereth into the Æquinoctiall ayrie signe Aries, making the day equall with the night: that is, betweene Sun-rise and Sun-set, and Sun-set and Sun-rise.

3 Solsticium Æstivum: or our Summer Quarter with vs according to Astronomy, beginneth the 11. day of June, 8. houres, 18. min. 45. sec. afternoone: at what time the Sun entreth into the 1. min: of the imaginary cold and moyst signe Cancer, then making his greatest Northerne declination, at which time is our longest day & shortest night in all the yeer.

4 Autumnall Æquinoctiall, our Autumne or Harvest Quarter with vs, beginneth according to Astronomy the 12. day of September, 20. houres, 19. min. 19. seconds afternoone, Titan, or Lux publica entreth the 1. min. of the imaginary, hot, moyst, ayrie signe Libra: which maketh against our [illegible] and dayes equall, or all [illegible] on the 20.

Anatomy of wonder great I ſpeake,
and yet am dead,
Men ſucke ſweete iuice from theſe blacke veines,
which mother wiſedome bred.

Preſages of weather, by the Raine-bow.

The naturall ſignification of the Raine-bow is euery whit ſitted to ſhew Raine either paſſed, or to come: For if it ſtay or abide in the mid-day, or noone ſtead (which it cannot do except in the night) ſhe giueth warning of very great Raine to come; if ſhe be obſerued to be ſeene in the Weſt, ſhe giueth warning of thin and ſmall raine to come ſhortly: but if ſhe be ſeene in the Eaſt, ſhe ſignifieth raine paſt by and by, and that it will quickly ceaſe, a faire and cleare weather to come. Alij ſic efferunt: If the Raine-bow ſhall be ſeene before noone, ſhe ſheweth the matter of Raine to be conſumed: If ſhe ſhall be ſeene after noone or about midday, ſhe declareth that raine is at hand, for becauſe that the Vapours be not as yet diſſolued or waſted. If two Raine-bowes appeare at one time, they giue warning of raine within 1. or 2. dayes after. A Raine-bow preſently after long raine, ſheweth faire weather preſently.

Predictions of weather, according to holy Scripture.

1. A Cloud riſing out of the Weſt it foreſheweth raine. Luke 12. 54.

2. And when ye ſee the South winde blow, ye ſay, there will be heat, & it commeth to paſſe. Luke 12. 55.

3. When it is Euening, ye ſay, It will be faire weather: for the skie is red. Mat. 16. 2.

4. And in the morning. It will be foule weather to day, for the skie is red and lowring. Mat. 16. 3.

5. South winde or heate in Summer, foreſheweth white waues. Iob 37. 9.

6. Winde in the North prepareth cold weather,

7 The North wind driueth away raine, Prou. 25.

8 The sweet influences of Pleiades ꝟ 7. Starres in ꝟ 24. & 25. degrees of Taurus, w the Moon, both bring raine, & the Sun with Orion in the 17. degree of Gemini, Iob 38.31. bringeth drought.

Thus wee see, though holy Scriptures doe ouer-throw weatherings: yet vnto vs we find not the euent alwaies true: Then iudge not so hardly of Astrology.

Astronomicall Elections briefly described for administration of Physicke.

Salomon saith, *To euery thing there is a season, and a time to euery purpose vnder the Heauen*, Eccle. 3.1.

LOuing Reader, I wish thee to ioyne coniunct my booke 1631. with it, is present, & you shall get right for this your purpose, which you cannot get in any one Almanack yet extant. Sed vt ad rem redeam. In the administration of Physicke, are chiefly to be obserued 3. things, viz. the time, the age, & the manner of administration. For the election of time, consideration is to be had both to the Moon in ꝟ Zodiack: & if it be not in extremity, either of heat or cold: & therefore, Hipocrates part ꝟ 6. & 46. aphorisme, saith, That the Spring & Autumne are more profitable for physick, then Summer or Winter: for in Summer the humours boyle, by reason of heat some veeres, & causing great annoyance to mens bodies: Yet if necessity bidde to take Physick in Summer, it is best in my conceit, to be taken by vomit: & in winter (if necessity do require) by Purgation. And as the famous Philosopher Hermes saith in his Iatromathematikes, Luna vero stella (sine benefica sive malefici fuerit) vtile applicuerit, illi suffragabitur. Concerning the Age, we are to vnderstand, ꝟ decrepit old age, & infants are vnfit to haue Physicke administred vnto them: & it is also dangerous in youth: For as a learned Physician saith, he ꝟ taketh much Physicke when he is young, will much repent it when he is old.

And lastly, for the manner of Physicke

ſtration, Albumaſars iudgement is, that the fitteſt times for Purgations, are to be elected according to the motion of the Moon in watry ſignes, as in Cancro, Scorpio, & Piſcibus.

Some hold opinion that the firſt halfe of Libra & Aquari are fit times: And alſo when the Moone is voyd of courſe (which is alwaies to be found in my Almanacke exactly) it is an indifferent time to take purgative Medicines.

Good to { Prepare humours, Vomit, Purge by Neezing, Take Glisters, Take Gargariſmes, Stop rumes & flux, Bathe for diſeaſes, } the ☽ in { Gem. Lib. or Aqua. / Ariet. Tau. or Cap. / Can. Leo. or Virg. / Ariet. Lib. or Scor. / Cancro, or Ariete, Tau. Virg. or Cap. / Ariet. or Sag. }

Purge with Electuaries, Potions, or Pilles, the Moone in Cancro, Scorpio or Piſc.

☽ in ☌ in a ✶ or △ aſpect of { ☿ not combuſt, is good to avoid Choller / ☉ is good to purge Phlegme / ♃ is good to expell melancholy } with Electuaries

☽ in ♈ in a ✶ or △ aſpect of { ☿ good to purge Choller / ☉ good to purge Phlegme / ♃ good to purge Melancholy } with Potions.

☽ in ♐ in a ✶ or △ aſpect of { ☿ good to purge Choller / ☉ good to purge Phlegme / ♃ good to purge Melancholy } with Pilles.

Note alſo that Venus be not combuſt (☿ is, when ſhe is within 15. degrees of the Sun, either before or after him:) And the Conjunction, Quartile, or Oppoſition of Saturne, Iupiter, or Mars, either to the Moon or betweene themſelues, for they hinder the operation of Phyſicke. Uſe no purging medicines when the Moone is joyned with ♃: for the effect therof will be abated by reaſon of Iupiters being hot, and moyſt, in which quality conſiſteth the vigour of life and nature.

The

The learned Phisicion will consider the Aspects of the Planets, & some fixed Stars within the Moone, and diuers other obseruations Astronomicall, for the necessary and conuenient administration of Phisicke. In regard wherof, and of thine owne bodily health and strength, I wish thee that thou refuse not his counsell, lest thou repent with Had I wist.

And note generally, for Phlebotomy a special help sometimes in administration of Phisicke; that it is not conuenient either for a very leane or fat massy man, nor a child of 14. yeers, or an old man aboue 56. to be let blood.

For the complection, let blood in { Flegmaticke, Melancholick, Cholericke, Sanguine, } The Moon being in { Ariete or Sagit. Libra or Aqua. Cancro or Pisc. either of them.

For his age, let blood in { Youth, from the change to the 2. quarter. Middle age, from the 2. quarter to the full. Elder age, from the full to the 3. quarter. Old age from the 3. quarter to the change.

Tempus Anni, Spring good, Autumne indifferent.

As concerning the time of the yeere, wherein bloud should be let; it is not a little to be regarded. For all such as are subiect to incurre these sicknesses & diseases following, namely: Apoplexiã, Epilepsiã, Phrenitidẽ, Virtiginẽ, Podagrã, Tussim, Scabiẽ, Anginã, Pleuritidẽ, Opthalmiã, Febres, Ruptură Vænæ, Inflammationes Viceru, &c. Item quibus retinentur ac sistuntur euacuationes sanguinis consuetæ, ut Hemorrhoides, & menstrua. All these ought to bee let blood, chiefly in the Spring time. But here also must be vsed discretion & consideration, for not in all these sicknesses, neither in euery of these persons, ought blood letting to be vsed, but in such, & to such, as necessity requireth. And according to the learned, the very hot or cold times of the yeere must be regarded in opening a veine: for saith Hipocrates, Aphor. 5. li. 4. Sub cane & ante canem difficiles sunt medicationes.

Tempus mensis. } The Moon in Tau. Gem. Leo, Virg. Capri.
Let not Blood, } The day before and after ☽ change & full.
} 12. houres before and after the Quarters.
} The Moon ☌ Iupiter, or ☽ euill aspected.
Tempus diei, the Morning after Sunrising fasting.
After noone, after perfect digestion: The aire Temperate, the winde not South, if it may be.
In these aspects following you may safely open a veine.

☌ △ ✶ } of the Moon ☌ Iupiter or Venus, not combust.

□ ☍ } of the Moon ☌ Iupiter or Venus, not combust, so ☿ } the Moone be in some good signe.

First prepare, & then purge, Augeæ stabulũ purgare, make ☽ body clean before you can hope to do any good.

An Vnguent or Plaister is best applied, when the Moone is in the imaginary signe attributed to the member whereunto it is applyed.

Certaine briefe Rules for Husbandry, Gardening, &c. superstitiously attributed to the Moone, mouing vnder the 12. signes of the Zodiacke.

THe premises considered in my booke, 1630. The best time to plant, and graft in, is in the increase of the Moone in Tauro, Aquario, or Capricorno: & not aspected by ♄, □, or ♂, of Saturne, or Mars.

Good to sow all manner of Corne, the Moone in Cancer. Sow Onions and Leekes, in Febr uary or March, at the wane of the Moone.

Sow Cabages in Febr uary, March, or Aprill, in ☽ wane of ☽ Moon: replant them in the decrease.

Sow Cabage, Lettise in Febr uary, March, or July, in the old of the Moone.

Sow seeds whose roots be round, 2. or 3. daies before ☽ fal, but to sow for store, take the increase from Febr. to June. Gather Apples & other fruits, hearbs and flowers, to haue them in most beauty, & greatest vertue, ☽ Moon at the full. Sow or set Garlicke,

Lettice,

Lettice, Parsnips, Carrots, Beate, &c. two wayes before or after the full Moone.

Good to set all sorts of Quick-set from Septe- ber, till March. Dung your Lands, that trees not abroade, in the last quarter.

Fell timber for building, from Midsummer Christmas, in the wane of the Moone.

Cut Coppice or Fewell, in the first quartter of Moone. Cut vines in Febuary or March.

Remoove trees the last quarter of the Moon, tweene Hollantide and Twelftide.

Good to lib or geld Cattell, when the Moon the Head, Thighes, or Knees.
